

Amendment #2
August 28, 2003
Storm Water Design Manual

Add a new section 9.3.2.3.5 for clarification

9.3.2.3.5 The hydrology and hydraulic analysis, of any site that has more than one sub-basin within a basin and the flow exits the site in different locations of the site and a detention facility is not provided, shall be done in reference to a single point. This point of reference shall be where the flows of the different sub-basins meet. This point of analysis shall be used to determine if detention is really required.

Approved 9-8-03
