

Gas Leaks

Call us immediately if:

You smell natural gas (exception: a faint odor near an appliance, that goes away after the pilot is lit).

Your gas service is suddenly interrupted.

Smell: A distinctive odor is added to natural gas as a way to alert you to a gas leak. To help you recognize this odor – which many people equate to that of rotten eggs – you can request a scratch and sniff sample. Simply mail a self addressed and stamped envelope to City of Lawrenceville, Gas Department P.O. Box 2200 Lawrenceville, Ga. 30046. Please included the number of scratch and sniff slips you are requesting.

A faint gas odor near an appliance may indicate that the pilot light has gone out. If the appliance has a pilot light and the odor persists after relighting, try and find the source. A strong gas odor may indicate a large leak. Exit immediately, leaving doors and windows open as you exit. Do not open windows if they're not already open. Do not use your telephone or cell phone, operate any appliance, light a match or turn light switches on or off. Call Lawrenceville Gas from a neighboring location.

Sight: If you see discolored vegetation, blowing dirt or bubbling water in the area of a buried natural gas pipeline, this could indicate a natural gas leak. Stay away from suspect area, then Call Lawrenceville Gas Department.
